

**Shoper Live Update
3.0
Release Notes**

Shoper Live Update

Document Information

Product : Shoper Live Update
Product Version : 3.0
Build No : 1.0
Prepared On : 27-Dec-2006

This document contains brief descriptions of the update features of Shoper Live Update v3.0. For detailed explanation and usage related information, please refer to Shoper Live update documentation.

Major features

Salient features are as follows:

- **Automatic Updates:** This tool helps to update an existing release (works from Shoper release 7.2 onwards) of Shoper products different Shoper products. Updates can be done manually or as scheduled task. Release 3.0 has a fix for issues faced in occasional disconnects while downloading files.
- **Products applicable:** This tool applies to different products like Shoper HO and Shoper POS and even variants like Shoper DC. The tool can be used from release 7.2 onwards.
- **Availability:** The tool is available for all eligible users (who are entitled to receive updates on the Shoper 7.2 releases). This release is available free of cost to help streamline the update process.
- **Modus Operandi:** The tool comes with a 3 fold, package, such as the Patch Update engine, Cabinet Data/Files, and History database. The file cabinet holds the control information, the patch downloads contained for the Shoper product update, and the script/INI files used for the patch applications. The Patch Update engine uses the information contained in the latter two and when executed checks with an inventory of what files are contained already in the Shoper products, whether a difference exists with the control info available, applies the patch contents and keeps up the historical data of the updates done. Historical data can be viewed to understand the updates done in the past.
- **Starting the Live updates:** The live updates tool shown as “Shoper Live Update” once deployed can be started with the shortcut available on a desktop or from the task bar from Start Programs and Shoper section or directly from the folders in which this is deployed. Settings related to the mode of download depending on the place from which the files are derived can be defined. Once the live update is initiated the respective Shoper application is updated to the latest conditions as available on the download location.
- **Impact of Customizations:** It is not recommended to use this tool without properly examining the customization of Shoper if done as this depends on the type of customization done and the changes that may have happened in the patch related to the customizations.

Issues Fixed

- Release 3.0 has a fix for issues faced in occasional disconnects while downloading files.
