Tally
POWER OF SIMPLICITY

Tally.Server 9
has improved productivity due to enhanced system availability

Customer Testimonial

"We are very satisfied with the speed and security of Tally.Server 9. Reports can now be generated in 1/10th the time."

Mr. Samir Lalani, Director

Customer Overview

Panchsheel Solvent Private Ltd. is a Raipur(Chhattisgarh) based company primarily engaged in extracting and distributing edible rice bran oil. They have an installed capacity of 1,50,000 tonnes per annum (TPA), 30,000 TPA for their solvent extraction and refinery units. The company also exports de-oiled rice bran. Panchseel has been associated with Tally since they computerised their operations in 2010. Specialised employees at Panchsheel Solvent manage the end-to-end production and distribution processes, as well as all administrative steps on Tally. Mr. Samir Lalani, the founder-Director of the company has used Tally extensively to monitor and record all activities and transactions.

The Growth Story

Since 2008, when Panchsheel started their company with just 15 employees, their business has expanded and the number of customers has grown. There has also been a corresponding increase in operations and infrastructure over the last few years. To cope with the new data load, a total of 15 computer systems were installed at the main facility to store all key data points across rice bran inward stock, unloading stock, production and sales. The company then added one hardware server to handle the data load across its plants and offices. However, even this proved inadequate and the systems were not able to manage the load of multiple users transacting on data. As production volumes increased, the problems were only compounded.

The Tally.Server 9 Implementation

The company needed a more robust software solution to sync systems and enhance data flow and it commissioned Welfare Infotech, a Tally Partner, to implement Tally.Server 9. Tally.Server 9 enhanced efficiency at Panchsheel by improving system availability to multiple users.

Key Benefits

Soon after the installation, the transactions in queue began to disappear and the impact of the product could be felt immediately at operator as well as management level. With system availability improving for the multiple users, the functional efficiency at Panchsheel went up substantially. Voucher entry and generation of MIS and production reports were now 900% faster. For Mr. Lalani, the transformation was phenomenal. Today, 150 employees can manage the rapidly-intensifying documentation that resulted from the growing number of daily transactions, without the delays caused by a slow system. The advanced security controls built into Tally.Server 9 helped the management reduce access to sensitive information that should have been viewable by privileged users only. Mr. Lalani is immensely happy with the value being delivered by their Tally Partner. In his estimate, Tally.Server 9 proved cost-effective and worked out well within their budget; now IT expansion will not be an issue as their business grows.

Highlights

- Enhanced system availability improves productivity ● Accelerated report generation slashes processing time
- Improved data security limits user access to sensitive information
